

Difference between JPA, Hibernate and Spring Data JPA

JPA	Hibernate	Spring Data JPA
JPA (Java Persistence API) is a specification for Object Relational Mapping (ORM).	Hibernate is an ORM framework that implements the JPA specification.	Spring Data JPA is a Spring module built on top of JPA that simplifies database access.
It defines interfaces and annotations.	It provides the actual implementation of JPA.	It provides ready-made repository interfaces like <code>JpaRepository</code> .
It cannot be used alone.	It can be used independently or with Spring.	It requires Spring Boot/Spring Framework and JPA.
Package: <code>jakarta.persistence</code>	ORM framework	Built on top of JPA + Hibernate
